

Name _____

Set A

You can use cubes to tell if a number is even or odd.

12

odd

even

$6 + 6 = 12$

Set B

You can use repeated addition to find the total number of loaves.

Write two equations that match the array.

Rows: $3 + 3 + 3 = 9$

Columns: $2 + 2 + 2 + 2 = 8$

Reteaching

Circle even or odd. Then write the equation. Use cubes to help.

1.

11

odd

even

$__ + __ = __$

2.

18

odd

even

$__ + __ = __$

Write two equations that match the array.

3.

Rows: $__ + __ + __ + __ = __$

Columns: $__ + __ + __ + __ = __$

Set C

You can draw arrays and use repeated addition to solve problems.

Alli has 3 shelves in her pantry.

She puts 4 cans of beans on each shelf.

How many cans of beans does Alli have in all?

$$\underline{4} + \underline{4} + \underline{4} = \underline{12} \text{ cans}$$

Draw an array to show the problem.
Use repeated addition to solve.

4. Steven puts 3 rows of apples on a table. Each row has 6 apples. How many apples does Steven put on the table?

$$\underline{\quad} + \underline{\quad} + \underline{\quad} = \underline{\quad} \text{ apples}$$

Set D**Thinking Habits****Model with Math**

Can I use a drawing, diagram, table, or graph to model the problem?

Can I write an equation to show the problem?

Draw a model and solve the problem.

5. There are 2 rows of cars. Each row has 8 cars. How many cars are in the parking lot?

$$\underline{\quad} + \underline{\quad} = \underline{\quad} \text{ cars}$$
